

Pro Meter

Bench Top, Two Part Dispensing System for Epoxies, Polyurethanes, Silicones, and Acrylics.

Full Performance, Maximum Simplicity, Minimum Price.

The **Pro Meter** is a compact bench top meter mix dispense system with big machine features. It is capable of delivering up to 10 lbs. of mixed resin per minute. The **Pro Meter** is powered by an air cylinder operating two piston pumps, that supplies properly proportioned material to the mixer. At the mixer, the materials are blended together and dispensed. All the controls are pneumatic and no electricity is required. The machine will pump automatically as long as the run switch is pressed. A 115v compressor with a tank is adequate for most operation.

The **Pro Meter** uses high tech, abrasive resistant, piston pumps with hardened parts and wear take up seals for long life. It can pump any self-leveling material. Even water thin materials are metered and dispensed accurately. The **Pro Meter** can be configured to deliver a continuous output of up to 10 lbs./min or single shots adjustable from 5cc to 169cc.

The **Pro Meter's** foot print is 40 x 26 inches and it stands only 30 inches high. It comes standard with nine-foot hoses and a mixer gun that uses disposable static mixers.

We also include a variety of spare parts, an additional instruction manual, and easy access to technical help.

Each **Pro Meter** comes preset within one of four ratio ranges and is fully adjustable within that range. Daily clean up of the **Pro Meter** is simple. Remove the static mixer, wipe and cap the manifold.

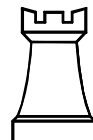

Options include: Dispensing guns with shut off, snuff back or dynamic mixing features; reservoir heaters, mixer manifold mounted on the machine, ½ gal to 5 gal reservoirs, continuous run or single shot output, pneumatic thumb control or foot switch, agitators, vacuum reservoirs, drum feed option, and stainless steel fittings for acrylics.
