

SUPER E

**Dispensing machine for
Epoxyes, Polyurethanes,
Silicones, and Acrylics.**

The **Super E** is a compact, bench top, meter mix dispense system with big machine features. It is capable of delivering 3b lbs. of mixed resin per minute. The **SUPER E** is powered by an air cylinder operating two piston pumps, that supplies properly proportioned material to the mixer. At the mixer, the materials are blended together and dispensed. All the controls are pneumatic and no electricity is required. The machine will pump automatically as long as the run switch is pressed. A 115v compressor with a tank is adequate for most operation.

The **SUPER E** uses high tech, abrasive resistant, piston pumps with hardened parts and wear take up seals for long life. It can pump any self-leveling material. Even water thin materials are metered and dispensed accurately. The Super E can be configured to deliver continuous output up to 3 lbs./min or single shots adjustable from 5cc to 50cc.

The **SUPER E** is a space saving 24 x 17 inches and stands only 18 inches high (including its rubber feet.) It comes standard with nine-foot hoses and a mixer gun that uses disposable static mixers.

We also include a variety of spare parts, two copies of the instruction manual, a static mixer sample pack, and easy access to technical help.

Each **SUPER E** comes preset within one of four ratio ranges and is fully adjustable within that range.

Daily clean up of the Super E is simple. Remove the static mixer, wipe and cap the manifold.

Options include: Dispensing guns with shut off, snuff back or dynamic mixing features; reservoir heaters, mixer manifold mounted on the machine, ½ gal to 5 gal reservoirs, continuous run or electronic shot size controller, pneumatic thumb control or foot switch, agitators, vacuum reservoirs, drum feed option, and stainless steel fittings for acrylics.
